

# VR Authorization setup instructions

1. Add to your scene VRAuthorization, VRInputSettings and VRKeyboardFull prefabs from Weelco package.
2. Select VRInputSettings prefab and choose your interaction method. More info about setup you can find in VRKeyboard README file.
3. For quick start there are demo scenes for each interaction method.

# VR Authorization settings

VR Authorization prefab contains the following settings:

## Settings:

- Password Min Length – setup password minimum chars count. If it will be less than required, Short Password error will be cause.
- Secure Password – Use secure data for password (every symbol will be hidden by bold star)

## Errors:

Show error text when error accour. There are four types of predefined errors

- Email field is empty
- Email addres is invalid (doesn't contain dot or @ symbol)
- Password field is empty
- Password too short (min password length setup in main settings)

## Notifications:

- Login Event – handle event when login button pressed and no error caused
- Register Event – handle event when register button pressed and no error caused
- Select Event – handle event when any autharization field selected.
